

# Summer Internship Report

**Type:**

On Campus Internship

**Mentor:**

Professor PM Jat

**Duration:**

May-June

**Team:**

Sharad Soni (201212019)

Kunjan Doshi (201212038)

Mudassir Malik (201212077)

**Subject:**

Online Registration System for MSc. IT Students at DA-IICT.

**Details:**

The registration system for the MSc IT Students is currently outsourced to the IT Firm, the aim is to create the same system as the DA-IICT Production that will be used for future student's registration.

*What this system has?*

Answer In this system students can register themselves for getting enrolled in the MSc.IT Program. (S)he can view the status of the registration i.e. the approval of Email Address, approval of Demand Draft, etc. On the other side, there is an admin role consisting of two roles i.e. Co-ordinator and Supervisor. Both the roles have their specific task to do in the system, i.e. Co-ordinator can approve the demand draft of the students whereas Supervisor can manage the centre location.

*How we made it?*

After the definition seen, we thought to use Java as a technology as it is secure and free. We then decided to use Struts2 and Hibernate framework for the same.
